COLLECTION 2026

# TRADITION

Born in the heart of Europe in 1947, Alpinista emerged from small shoemaking workshops nestled in the Alps, founded on a simple belief – that every step should feel natural, strong, and free. Over the decades, that belief has grown into a legacy. Today, Alpinista is a symbol of superb European craftsmanship and innovation in active footwear.

From the icy peaks of world-class ski slopes to the rhythm of everyday life, Alpinista creates footwear for those who move – for those who live actively, explore boldly, and value comfort as much as performance. Our shoes are trusted by Olympic champions and elite athletes, whose pursuit of excellence inspires everything we do. Each pair is crafted with precision, using carefully selected materials, advanced ergonomic design, and deep knowledge of how the foot moves – turning decades of experience into effortless comfort and superior performance. But Alpinista isn't only about winning medals. It's about the quiet joy of a perfect stride, the freedom of movement, and the confidence to go further – whether on snow, trail, or city street.

With a proud heritage, countless design awards, and a growing presence across Europe, the Americas, and Asia, Alpinista continues to shape the future of active footwear – one step at a time.

# TECHNOLOGIES

## PROACTIVEFIT

### Precision fit proven in the field

To achieve the right fit, we developed ProActiveFit™, a last shaped through a wide field of outdoor enthusiasts' feedback and detailed analysis. We began with insights from shop experts and boot fitters, then listened to online reviews and in-store feedback from everyday users. This gave us a strong starting point for the boot's fit and volume. Once the last was created, we tested it on a variety of different foot types – confirming that the contact points and comfort zones were exactly where they needed to be. The result is a shape that combines a secure heel and ankle connection with natural space for the toes and instep.

## FREE HEEL TECHNOLOGY

### Optimal Comfort and Performance for All Terrains

Extensive research and testing have shown that feet move uniquely during cross-country skiing and hiking, and our boots are designed to accommodate these movements. Alpina "Free-Heel" technology features a specially shaped heel counter, providing adventurers with maximum comfort and performance. This unique design and manufacturing process ensure your feet enjoy freedom and support at every moment, no matter the terrain.

## VCP

### VOLUME CONTROL PLATE: personalized Footwear Experience

Introducing Alpina's Volume Control Plate (VCP), an engineering marvel placed under the insole to fine-tune your boot's volume. Every foot is different, and the VCP allows you to customize the left and right foot independently. Adjust for a perfect fit that provides optimal comfort and support. If you need more space, removing the plate is easy. Experience a personalized fit with the VCP, designed to accommodate the unique shape of your feet.

## YKK ZIPPER

### Premium zip built to last

A YKK® zipper is a premium-quality fastening system known for exceptional durability, smooth operation, and long-lasting performance. Widely used in tactical, hiking, and lifestyle footwear, it allows quick and secure entry while maintaining a reliable hold. Resistant to wear and repeated use, YKK® zippers ensure consistent functionality even in demanding conditions.

## ULTRA LIGHT

### Enhanced Racing Experience

Lightweight boots boost speed, agility, and energy efficiency. By reducing the weight of each step, they allow faster strides and better power transfer. Our commitment to creating the best and lightest XC racing boots is reflected throughout our entire collection, giving outdoor enthusiasts enhanced performance and endurance on every level.

## MADE IN EUROPE

### European Craftsmanship: handmade to the Highest Standards.

Crafted in Europe, our footwear represents the pinnacle of handmade production, demanding exceptional levels of craftsmanship and shoemaking expertise for unmatched quality.

## **INTEMP**

### **Comfort powered by smart warmth**

Alpina's fully integrated InTemp heating system keeps your feet comfortably warm in cold conditions without overheating. With a simple press of a button, the system quickly warms the foot and then automatically adjusts to maintain an optimal temperature. Multiple heat settings allow easy control depending on weather conditions and personal preference, while the integrated battery and weather-resistant components ensure reliable performance and simple charging for consistent comfort throughout the day.

# FEATURES

## OUTSOLES

### MICHELIN

Reimagined for professionals and outdoor adventurers, our shoes are built on four core design principles inspired by movement. MICHELIN soles deliver unmatched **durability, stability, and comfort**, with a grip that excels across various terrains.

### RUBBER

Rubber Outsole is a **highly durable and abrasion-resistant** sole material that provides excellent grip and long-lasting performance. It ensures reliable traction and stability on various surfaces, even under heavy use.

### STORM

Built for light trails and mixed terrain, the STORM outsole features 4 mm lugs for **enhanced traction and stability**. Paired with an SMVEVA midsole and 8 mm heel drop, it offers **excellent shock absorption**, balanced support, and reliable grip on gravel paths, moderate trails, and off-road surfaces.

### SURGE

Designed for street, urban, and light activity use, the SURGE outsole features a minimalist tread pattern for **smooth, stable movement** on paved and non-technical terrain. Combined with an SMVEVA midsole and 8 mm heel drop, it delivers **lightweight cushioning, responsiveness, and all-day comfort** – ideal for walking, running, gym, and everyday exercise.

### VIBRAM

For over 80 years, Vibram has led the industry in high-performance rubber soles for outdoor, leisure, workwear, fashion, and orthopedics. Recognized globally by its yellow octagon, Vibram stands for **quality, safety, and innovation** in footwear.

## GAITERS

### NUBUCK LEATHER 1,6-1,8MM / 2,6-2,8 MM

Nubuck leather, crafted from the outer side of hides, showcases a **luxurious and velvety texture**. This exquisite material retains its natural grain, undergoing a brushing and polishing process to create a subtle nap of short protein fibers. The result is an opulent surface that exudes a lush and captivating appearance. Nubuck leather embodies the perfect blend of untouched elegance and remarkable softness, making it a sought-after choice for those who appreciate refined craftsmanship.

### BOX LEATHER 2,0-2,2 MM

Premium boots feature soft, **fine-grained leather** treated with chromium salts and dyed during production. This high-quality material is known for its **flexibility, absorption properties, and durability**, making it the ideal choice for the tongues and collars of these boots. Crafted with meticulous attention to detail, these boots offer not only exceptional comfort but also a sophisticated look for the discerning wearer.

### SPLIT LEATHER 1,4-1,6 MM / 1,6-1,8MM

Split leather is a versatile material derived from the lower part of the cowhide after the top grain has been removed. Known for its durability and ability to retain color when dyed, split leather is commonly used in areas exposed to high abrasion. It features a split leather backing covered with an embossed layer of polyurethane or vinyl, giving it a slightly stiffer feel. With a variety of thickness grades available, split leather offers reliable performance for various applications.

### MICROFIBER

Microfiber, a synthetic material with fine fibers thinner than human hair, is popular in footwear due to its **softness, lightweight feel, and high breathability**. It offers enhanced comfort, durability, and moisture-wicking properties, making it an excellent choice for reliable, comfortable footwear that can withstand various activities.

### DWR MATERIAL

DWR Mesh is a **breathable mesh material** treated with a durable **water-repellent** coating. It allows **excellent airflow** while helping water bead off the surface, keeping the shoe lighter and more comfortable in damp conditions. Ideal for lightweight outdoor and performance footwear.

### MESH

Mesh is a popular choice for shoe uppers, providing **excellent breathability and moisture control**. This lightweight and breathable material allows air to circulate freely around the foot, **keeping it cool and dry during intense activities**. Mesh is commonly found in athletic and urban shoes, where airflow and moisture management are essential for optimal comfort. Its open structure promotes ventilation, making it a reliable option for those seeking breathable footwear during high-intensity pursuits.

## PRO

The gaiter is made from a **high-elastic, non-PVC technical fabric**, making it **environmentally friendly** while maintaining top performance. An elastic collar band ensures a secure fit, while dual protective foils provide targeted protection – a durable, abrasion-resistant layer on exposed areas and a transparent, waterproof barrier to prevent moisture intrusion.

## RIPSTOP

Ripstop is a **lightweight, tear-resistant fabric** woven with reinforced threads that prevent small rips from spreading. In footwear, it enhances **durability while maintaining flexibility and low weight**, making it ideal for hiking, tactical, and outdoor shoes.

## MIDSOLE

### EVE

Known for its **durability and flexibility**, EVA foam excels in **shock absorption**, making it ideal for shoe insoles and midsoles. Its cushioning properties enhance comfort and reduce fatigue in active settings.

### FLOAT CM

FloatCM® is a **lightweight midsole cushioning material** that provides **excellent shock absorption and responsive comfort**. It reduces shoe weight while delivering soft, energy-returning support for all-day wear.

### PU DIRECT INJECTION

PU Direct Injection creates a **strong, seamless connection** between the upper and sole, resulting in **excellent durability, cushioning, flexibility, and long-lasting comfort**. It also improves water resistance and reduces the risk of sole separation.

## MEMBRANES

### MEMBRANE

Material: PU Membrane

The Alpitex membrane provides additional protection against water and moisture, which increases comfort, even in more extreme weather conditions.

### ALPINA IGLOO

Enhanced Thermal Protection with Felt Insulation

Our footwear features advanced use of premium felt insulation, tailored for extreme weather conditions. This high-quality material provides unparalleled thermal comfort, safeguarding your feet against the cold.

### SYMPATEX

Advanced Sympatex Protection in Alpina Boots

Alpina boots are equipped with the Sympatex membrane, offering exceptional water resistance and ventilation. With a water column of over 45,000 mm, they significantly surpass the top DIN EN 343 standard, ensuring readiness for any weather condition.

### THINSULATE INSULATION

Extreme warmth for extreme conditions

“Thinsulate” insulation provides up to twice as much thermal shoe insulation. It provides the foot maximum thermal comfort even under icy and high-humidity conditions.

## LACING

### PRIME LACING

A braid angle of 90° relative to the longitudinal direction of the shoe provides **maximum grip** in the instep and ensures a **tight fit** between the boot and the heel when skiing the classical technique.

### SPEED LACING

Discover the convenience of Speed Lacing with our **lightweight, low-profile boots** designed for **quick and easy adjustments**. The one-pull tightening system ensures a secure and comfortable fit in seconds.

### TOP-TO-TOE LACING

Experience climber-inspired extended lacing for a tailor-made fit. This system allows **detailed customization** from the ankle to the toe, ensuring a **secure and comfortable fit** for any activity.

### VELCRO STRAP

Velcro strap in shoes is a hook-and-loop fastening system that allows **quick, easy, and adjustable closure**. It provides a **secure fit** without laces, making footwear more convenient to put on and take off.

## FOOTBEDS

### ORTHOLITE

Alpina OrthoLite® insole technology creates a thermal barrier that **elevates footwear temperature regulation** to an unprecedented level, infusing open-cell PU foam with a proprietary aerogel, creating the lightest, most advanced version of the world's most insulative material, delivering **unmatched thermal insulation and all-day comfort** and cold weather protection underfoot.

Versatile protection and durability for demanding trails. Crafted from premium nubuck leather with a waterproof, breathable Sympatex® membrane, they keep feet dry and comfortable in rain, snow, or damp conditions. A high-traction Vibram® outsole ensures secure grip on rocky, muddy, and uneven terrain, while stable ankle support reduces the risk of twisting on longer hikes. The adjustable VCP system allows a customized fit for optimal comfort. Made in Europe for lasting quality and performance.

 NUBUCK LEATHER 2,6-2,8 MM

The Ultimate Backpacking Boot for Rugged Adventures. Experience European craftsmanship at its finest with the Alpina Nepal, a rugged and reliable backpacking boot designed to tackle the most demanding terrains. Built for those who seek stability, durability, and premium comfort, this boot is a trusted companion for long treks, alpine hikes, and multi-day expeditions. Featuring a Vibram outsole, the Nepal ensures exceptional grip and stability, keeping you secure on uneven and slippery surfaces. The Sympatex waterproof membrane offers dry comfort and breathability, protecting your feet in wet and cold conditions. Crafted from premium 2.8mm nubuck leather, this boot is built to withstand harsh environments while maintaining flexibility and comfort. For a personalized fit, the Nepal includes Alpina's VCP (Volume Control Plate), an innovative feature placed under the insole that allows you to fine-tune the volume of the boot for each foot independently. Adjust for optimal comfort and support, and if additional space is needed, the plate can be easily removed. This ensures a customized fit for long treks, reducing fatigue and enhancing overall comfort.
