EXOGON BACK PROTECTOR

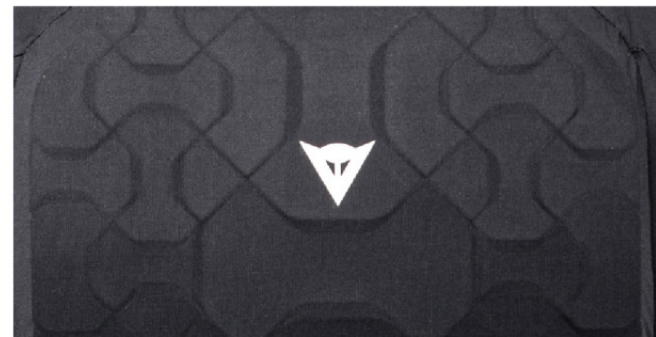

EXOGON introduces a new generation of protection through PRO-SHAPE technology, a lightweight, highly ventilated auxetic structure that expands upon impact to increase coverage, also protecting the skier's lateral and lumbar areas. Its stability and secure fit derive from the study of lines of non-extension, a biomechanical principle inspired by aerospace engineering that allows the protector to follow the body's natural dynamics without shifting. The construction combines a lycra outer layer with an adjustable strap system, ensuring constant ergonomics, stability, and breathability. A technical design created to deliver effective protection and full freedom of movement throughout every phase of the descent.

FLEXAGON BACK PROTECTOR

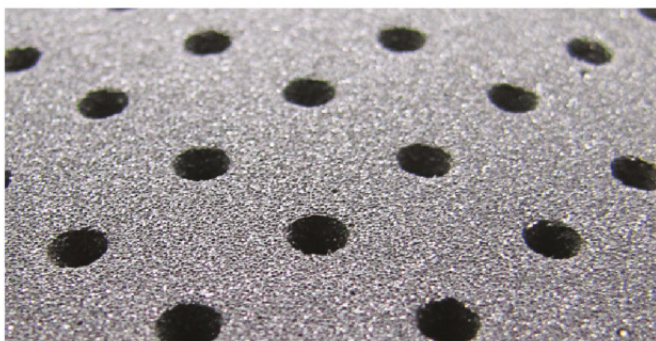

Flexagon redefines the standards of protective comfort with its innovative construction technology. The exceptional flexibility is aided by overlapping layers of Crash Absorb® memory retention foam that move independently of one another, and follow the anatomy of the body. Its ergonomic pattern of hexagon shaped soft pads provide comfort and maximum freedom of movement (6 sides, mobility on the 30° 90° and 150° axes) along with effective protection.

AUXAGON BACK PROTECTOR

Inspired by the geometry of auxetic structures, which expand in all directions when placed under tension, Auxagon protective technology ensures extreme flexibility and adaptability, following the movements of the human body with extreme precision. Ultimate ergonomics for a superior fit on the back. Auxagon protectors are composed of three independent layers, which glide over each other, offering exceptional mobility for maximum freedom of movement during physical activity. Lightweight and comfortable with maximum protection in all conditions.

CRASH ABSORB

Special material (water-repellent elastic-visco nitrile rubber) with shape retention memory and excellent energy absorption that adapts perfectly to the shape of the body and ensures optimum fit.
